foot

**Stay active with  
maximum mid-foot  
support**

# Medial Mid-foot Brace

Adjustable Brace for Mid-foot Pain Relief

# Medial Mid-foot Brace

Alpha Orthotics™

INNOVATIVE ORTHOTIC SOLUTIONS

The **Medial Mid-foot Brace** provides longitudinal arch support, relieving mid-foot pain caused by general foot stress and strain including splayfoot and fallen arch. This brace, with its adjustable straps and pad, provides support where you need it, when you need it – in sports and everyday life.

*Light-weight and thin, slips into non-restrictive dress or casual shoes.*

*Thin profile cushioned splint braces the inside border of the foot.*

*Dual strapping system provides inward and upward support to the mid-foot.*

*Metatarsal pad provides lift to the transverse arch.*

## An innovative mechanical solution for a biomechanical problem

- In conjunction with orthotic support, the brace provides optimum stabilization for the longitudinal arch.
- Re-establishes metatarsal arch, distributing pressure to the ball of the foot.
- Helps re-establish normal foot mechanics to reduce pain.

This brace provides support where you need it, when you need it.
